

Mint Energy, LLC Environmental Disclosure Label

New Hampshire- Commercial & Industrial

Consumer Information About Your Electricity Supplier

July 2017

Most Recent 12 Month Data

Latest Quarter: 1st Quarter 2017

Electric providers are required by the New Hampshire Public Utilities Commission to provide customers with an environmental disclosure label with information to evaluate services offered by competitive suppliers and electric utilities, and to provide information about the environmental and public health impacts of electric generation. Further information can be obtained by calling your electric utility or competitive electric supplier, or by contacting the Public Utilities Commission. Additional information on disclosure labels is also available at <http://www.puc.nh.gov> or on your electric provider's website.

Your Electricity Supplier is: Mint Energy, LLC

This fact sheet provides consumer information about the power sources and air emissions of service provided by this electricity supplier.

Power Sources

April 1, 2016-March 31, 2017

This supplier provided electricity with the following NEPOOL System mix of resources:

Power Sources	Supplier's Mix	New England Mix
Biodiesel	<0.01%	<0.01%
Biomass	1.95%	1.95%
Coal	3.17%	3.17%
Diesel	1.21%	1.21%
Digester gas	0.07%	0.07%
Efficient Resource (Maine)	0.26%	0.26%
Fuel cell	0..25%	0..25%
Hydroelectric/Hydropower	5.76%	5.76%
Hydrokinetic	<0.01%	<0.01%
Jet	0.01%	0.01%
Landfill gas	1.00%	1.00%
Municipal solid waste	1.09%	1.09%
Natural Gas	39.37%	39.37%
Nuclear	29.25%	29.25%
Oil	7.34%	7.34%
Solar Photovoltaic	1.68%	1.68%
Trash-to-energy	1.95%	1.95%
Wind	3.68%	3.68%
Wood	1.94%	1.94%
Total	100%	100%

Air Emissions

April 1, 2016-March 31, 2017

This table compares air emissions from this supplier's electricity mix to average emission levels from all New England power sources.

Supplier's Mix (lbs/MWh)

Carbon Dioxide (CO₂)

837.32735

This is equivalent to the average emission levels from all New England power sources

Nitrogen Oxide (NO_x)

0.74756

This is equivalent to the average emission levels from all New England power sources

Sulfur Dioxide (SO₂)

0.89753

This is equivalent to the average emission levels from all New England power sources

Notes: lbs/MWh = pounds per Megawatt-hour.

1 Megawatt-hour = 1,000 kilowatt-hours

Additional Information and Required Notes:

Power Sources: New Hampshire law requires retail electricity providers to periodically provide information to their customers on the mix power sources used by the provider to serve their New Hampshire customer's load.

Emissions: Carbon Dioxide (CO₂) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming. Nitrogen Oxides (NO_x) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog). Sulfur Dioxide (SO₂) is formed when fuels containing sulfur are burned. Major health effects associated SO₂ include asthma, respiratory illness and have other environmental impacts. Environmental impacts differ among individual power plants.

If you have questions or need further explanation please call Mint Energy, LLC at 1-877-611-6468 or the New Hampshire Public Utilities Commission, toll free at 1-800-852-3793. Additional information can also be found at <http://www.puc.state.nh.us/>
