

Energy Lock Plus™ (“EL+™”) is similar to Mint Energy’s Energy Lock product, a simple, full requirements, traditional fixed price product with the added benefit to optimize market volatility through the curtailment of energy consumption during peak demand periods. Limiting energy use during high-demand energy periods reduces total power consumption and can save customers significantly on their electricity bills. Energy Lock Plus now provides the additional benefits for customers to receive credits for their reduction in consumption during high demand energy periods.

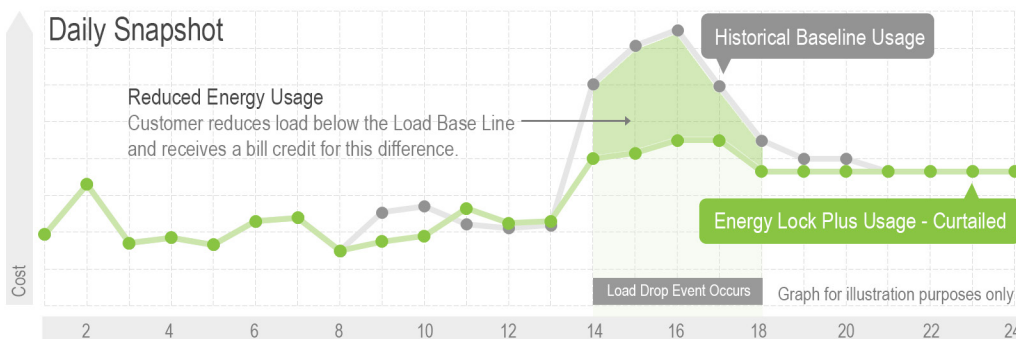

During periods when wholesale electricity prices are anticipated to rise higher than normal customers are alerted via email, telephone, and/or text by a Price Response Provider (Mint Energy or a participating consultant) and are given the suggestion to reduce electricity consumption. These events are called Load Drop Events (“LDE”) and will be predicted by a Price Response Provider.

Mint Energy will establish a Load Baseline for customers, and those customers that reduce their usage below the Load Baseline during a high demand energy period would be eligible for an electricity bill credit .

### Energy Lock Plus Key Points

- When a possible LDE is determined, a notification will be sent to the designated contact detailing the anticipated hours of the event and the likelihood the event will happen.
- EL+ will be available to commercial account customer with an interval meter, ‘smart meter,’ or other utility grade meter that reports usage in intervals of at least 15 minutes. The interval meter must be installed and functional before you start generating revenue from energy sale-back. Available terms range from 12-48 months.
